

## Most Interesting Concepts

During this class, I was most interested in using static analysis to analyze malware, solving crackmes, and using tools like RegShot in making a program to remove njRAT. I chose these concepts because I enjoy solving puzzles, and these assignments and activities during class were interesting challenges for me.

## Most Useful Topics

I feel that, of the skills I've learned in this course, the ability to use decompilation tools like Ghidra, increased familiarity with debugging tools like GDB, and exposure to concepts dealing with memory forensics will all serve me the most in my career in the future.
